Position: **Post Doctoral Fellow**

Responsibilities: Conduct research as well as write manuscripts and grant applications pertaining to cancer research. The successful candidate should already have a publication in the field of cancer research and will supervise undergraduates doing research in our laboratory as part of the Wood Hudson Undergraduate Research Education Program (UREP). Our current undergraduates come from several regional universities. Students work in the laboratory on a regular basis and have research and journal discussions each week.

We see a Post Doctoral Fellow as a trainee who is building upon their doctoral experience to broaden their understanding of cancer and expand their research capabilities. This position offers an opportunity for professional development in a collegial and supportive research environment.

Salary commensurate with experience

Education Requirements: Ph.D. in Cancer Biology or a closely related field

Applicants with diligent work habits, “good hands” in the laboratory, and excellent communication skills are invited to email a resume/CV and two letters of recommendation to Dr. Julia Carter at jcarter@woodhudson.org.

Our facilities include laboratories for cell culture, genetics, molecular biology, biochemistry, histology and microscopy. Over 2.2 million human surgical specimens are archived in the Wood Hudson Biospecimen Repository including specimens from over 60,000 cancer patients. Solid tumors from nearly all cancer sites are available for study. The organization is open to new ideas and new techniques.

Please see our peer reviewed scientific publications at <http://woodhudson.org/publications> for current research interests.
